Get your meeting going

Simply working smarter with the Philips Conference Recording System

PHILIPS

Is having accurate minutes available immediately after every conference still a challenge for you?

The professional Philips Conference Recording System is a compact, easy-to-use solution for all your conference recording needs. It provides excellent sound quality with cutting-edge technology, making recording, transcription and archiving a breeze. The expandability of components allows the system to grow with the needs of your business.

Make every conference a success!

Digital Pocket Memo 955

A special edition of the Philips Digital Pocket Memo with two-channel audio recording provides a crystal clear recording of everything that is said. The flexible Philips conference microphones and the unique remote control allow the solution to be used as a recording system, even for large conferences. Completed recordings can be quickly transferred to a PC via a USB cable or SD card for archiving or professional transcription.

Remote control

All major recording functions can be managed with the handy remote control. The robust design guarantees a recording process without distraction. It enables the user to start or stop recording at any time, and to set index marks so that specific points in the recording can be found instantly. At the push of a button, the system can automatically record the next agenda point to a new file.

Interview recording

The compact click-on interview microphone transforms the Digital Pocket Memo into a fully functional stereo-quality interview recorder with no additional wires or components. It's the ideal mobile solution for recording interviews in high-quality mode.

Conference microphone

The Boundary Layer Microphone, a ground-breaking conference microphone, allows sound pick-up from a 360-degree radius for comprehensive recording with maximum quality. Its unique appearance with a plate-shaped foot provides the ideal conducting surface that enables sound to reach the microphone.

To record large conferences, the system can be easily extended by connecting up to six microphones (daisy-chain). With its extendable wire including wire storage, the conference microphone demonstrates sense and simplicity.

Convenient software

The professional software, SpeechExec Pro Dictate, allows file routing, editing and archiving of all recordings. The professional DSS recording format seamlessly integrates recording files for a professional transcription environment.

One system

The elegant metal carrying case guarantees easy transportation, as well as appropriate storage of your Conference Recording System.

Innovative functionality out of one case

- Easy to use out-of-the-box solution
- Quick set-up with innovative conference microphones
- Professional two-channel recording and exceptional sound quality
- Choice of recording formats for individual needs – PCM (Audio-CD quality), MP3, DSS Pro, DSS
- Industry standards for full flexibility – SD card, Mini-USB, 3.5mm sockets
- All accessories for immediate operation included – docking station, power supply, rechargeable batteries, etc.
- Elegant metal carrying case for portability
